

NEW OUTLET ZONE DAMPERS

*For when you can't install a damper in the duct....
...put one in the outlet!*

- Efficient Opposed Blade Damper Design
- Quiet Operation
- Easy Plug-In Motor Wiring
- Long Life Motor
- Control up to 10 Outlets per Zone
- 100' Plenum Rated Cable Included
- Only 2-1/4" Deep

Over 45 years ago we designed and patented the first motorized outlet registers, floor and ceiling diffusers. The initial cost of a motorized unit at each outlet made this an expensive form of zoning. Today as the cost of energy increases and the economics of zoning becomes more and more beneficial we're re-introducing the outlet zone damper. These dampers are available in all outlet sizes and insert into the rectangular/square outlet opening. Each damper is operated by our exclusive plug-in damper motors and includes a 100' length of plenum rated cable that just plugs in at the damper and panel.

OZD shown in floor boot

Standard Sizes: 4x10, 4x12, 4x14
6x10, 6x12, 6x14

Other sizes available.
