## H-SERIES Miniature Pressure Switches

## Low-Cost Switches with Adjustable Set Points

## Features:

- Field adjustable set points.
- Fixed deadband.
- Choice of open frame type, general purpose or watetight enclosure.
- Small size.
- Mounts in any position.
- Rugged and vibration resistant, e.g., for compressors.
- Visual adjustment scales in psig and bars.

## General Description:

H -Series miniature pressure switches have field adjustable set points and fixed deadband, with diaphragm/piston sensor. They are available in open frame construction, Type 1 general purpose or Type 4 watertight enclosures. The resilient diaphragm/piston construction helps provide long life and maintains set point repeatability despite environmental temperature variations. The full size electical switch is a precision UL listed, snap-action type. H-Series switches are CSA approved and are UL listed under "Industrial Control Equipment".

Proof pressure:
250 psig. (Consult factory for higher pressures).

## Process connection:

Standard: 1/8" NPT Ext, 1/8" NPT Int, 1/4" NPT Ext.
Optional: $1 / 4$ " NPT Int (eighth digit " 3 ").

## Standard Electrical Ratings

15 Amp Res., 125 VAC
10 Amp Res., 250 VAC
1/8 HP, 125 VAC
$1 / 4$ HP, 250 VAC
1/2 Amp Res., 125 VDC
1/4 Amp Res., 250 VDC

(1) Open frame construction, UL recognized component.

Wetted Materials (Process Connection \& Diaphragm)

```
Standard: Brass and Buna "N"
Optional Process Connections:
    -316 SS (sixth digit "4")
    - Carbon steel (sixth digit "6")
Optional Diaphragms:
    - Viton (seventh digit "2")
    - Neoprene (seventh digit " "3)
    - Ethylene propylene (seventh digit "6")
    •Fluorosilicone (seventh digit "7")
```

## Switch Options

See page $\underline{34}$ for optional snap switches.

## ASCA TR14

## How to Select and Order

ASCO H-Series switches are a single switch and transducer assembly.

## How to Select

1. Select type of switch (open frame, general purpose or watertight)..
2. Select the adjustable operating range based on the desired actuation pressure.
3. Select desired process connection.

How to Order
Simply order the selected H -Series pressure switch by catalog number, e.g., HB46A218 describes an open frame pressure switch with adjustable operating range of 4 to 12 psig, $1 / 8$ " NPT external brass process connection and Buna "N" diaphragm.

## Options

Add appropriate suffix or change appropriate digit in catalog number for desired option, e.g., HB46A2 28 Pdescribes an open frame pressure switch with optional viton diaphragm (seventh digit "2") and gold contact snap switch (suffix "P").

## Select H-Series pressure switch below

## How to Select and Order

ASCO H-Series Suffix S switches are a single switch and transducer assembly.

How to Select

1. Select type of switch enclosure (open frame, general purpose or watertight). 2. Select the adjustable operating range based on the desired actuation pressure and desired deadband (reactuation) pressure. 3. Select desired process connection.

How to Order
Simply order the selected H-Series Suffix S pressure switch by catalog number, e.g., HB46A218S describes an open frame H-Series Suffix S pressure switch with adjustable operating range of 4 to 12 psig and adjustable deadband at mid-range of 1.5 to $3.5 \mathrm{psig}, 1 / 8$ " NPT external brass process connection and Buna "N" diaphragm.
Options (See page 4)
Change appropriate digit in catalog number for desired option, e.g., HB46A2 2 8S describes an open frame pressure switch with adjustable operating range and deadband with optional viton diaphragm (seventh digit " 2 ").

## Suffix L: Lowest-Cost Switches with Adjustable Set Points (Open Frame Construction)

## Features:

- Low cost for OEM applications.
- Miniature size.
- Wide selection of adjustable ranges.
- Fixed deadband.
- Resilient diaphragm/piston sensor for long life.
- Precision single-pole, double-throw snap switch with quick-connect $1 / 4^{\prime \prime}$ spade terminals.

## Standard Ratings and Wetted Materials <br> (See page 4)

## OPTIONS Pressure/Temperature Switches

## H-Series, P-Series and S-Series <br> Snap-Action Switch Options

Optional snap-action switches to meet specific electrical loads or application conditions are available on most ASCO TRI-POINT switch units. Generally, the construction of a switch unit with optional snap-action switches contains other specific parts and may be ordered only as a factory-built unit. To specify a particular optional construction, add the appropriate suffix to the switch unit catalog number, e.g., SA10D with optional gold contact snapaction switch (suffix "P") would become SA10D P.

## P-Series

## Switch Options

Panel Mount - Open frame P-Series compact switch units are available for panel mounting with the switch unit inside and the transducer outside. The panel separates the fluid sensing portion from the electromechanical portion. Five holes for bolts and operating stem must be drilled or punched through the panel. Three constructions are available: add the suffix listed below to the switch unit catalog number for the desired thickness.

| Description | Electrical Rating | Catalog Suffix | Deadband Variation From Listing |
| :---: | :---: | :---: | :---: |
| DC Rating 1 Amp Double Break | 5 Amp, 125, 250 VAC 1/4 HP, 125 VAC 1/2 HP, 250 VAC 1 Amp, 125 VDC 1/2 Amp, 250 VDC | G | $\begin{gathered} \text { SA: +50\% } \\ \text { SB, SC, PA: +100\% } \\ \text { H: +200\% } \\ \text { PB: +400\% } \end{gathered}$ |

## S-Series <br> Switch Options

Industrial Adjusting Nut Covers Available in clear plastic or metal to prevent tampering with set point adjusting nuts.
Clear plastic cover: To order, add suffix "1" to the switch unit catalog number, or order separately as SP01. Metal cover: To order, add suffix "2" to the switch unit catalog number, or order separately as SP02.
JIC Construction - A switch unit having the electrical and adjusting nut covers attached to the switch body by a chain. Also designed to Type 13 specifications. To order, add suffix " 3 " to the switch unit catalog number, or order separately as SP03.
Terminal Block - Applicable to switch units with one single-poledouble-throw switch. The terminal strip is prewired to the snap-action switch. To order, add suffix " 4 " to the switch unit catalog number, or order separately as SP04. Factory Sealed - Explosion-proof units may be ordered with a factory seal separating the electrical chamber from the conduit hubs and 24 " long \#14 AWG $105^{\circ} \mathrm{C}$. rated lead wires. To order, change the fourth digit of the switch unit catalog number from " 2 " to "3", e.g., SA12D becomes SA13D.

## Definitions and Fluid Compatibility Guide

## Definitions

Accuracy - The maximum deviation from the set point under specified operating condition (ambient temperature, barometric pressure, etc.).

Adjustable Deadband - Refers to the capability of a pressure or temperature switch to allow the deadband to be adjusted over a given range. Certain ASCO TRI-POINT switches have an adjustable deadband which can be adjusted over the total operating range of the switch.

Adjustable Operating Range - The pressure or temperature range of the switch within which the set point may be adjusted.

Differential Pressure - The difference between two pressures. A differential pressure switch senses two pressure sources and can be adjusted to actuate on a desired difference between them.

Guage Pressure - The actual reading of a typical pressure guage and is the difference between the pressure within a vessel and the atmospheric pressure surrounding it. It is normally measured in pounds per square inch (psig).

Manual Reset - The switch is a semi-automatic device which operates automatically with a signal change in one direction but must be manually reset once the signal returns to its original position.

Proof Pressure - A pressure which a device can be subjected to for extended periods of time without changes in its operating characteristics.

Rated Overrange Temperature - A temperature which a device can be subjected to for extended periods of time without changes in its operating characteristics.

Repeatability - The closeness of agreement among a number of consecutive measurements of the output for the same value of input under the same operating conditions approaching from the same direction. Repeatability is normally specified as a percentage of the upper limit of the operating range.

Example: Operating range $5-100$ psig with $\pm 1 \%$ repeatability; equals $\pm 1 \%$ of 100 psig or $\pm 1$ psig.

Reset Point - After a pressure or temperature switch has reached its set point and operated the electrical switch, it must return to a point called the reset point before the electrical switch can return to its original position.

Set Point - The pressure reading at which the electrical switch element changes contact position (it can be specified either increasing or decreasing).

Switch Unit - ASCO uses the term "switch unit" to describe the electromechanical portion of a pressure or temperature switch. This is used in conjunction with a transducer unit to form a complete pressure or temperature switch.

Transducer Unit - ASCO uses the term "transducer unit" to describe that portion of a pressure or temperature switch to which a pressure or temperature is applied which converts the input signal to another form of energy to operate the switch unit.

Two-Stage (Dual) - ASCO uses the term "two stage" to describe a pressure or temperature switch which is equivalent to two pressure or temperature switches which are independently adjustable. This switch is equivalent to two fixed deadband switches.

Deadbands - The deadband is the difference between the set point and reset point readings. Deadbands are listed in the specification tables at nominal values. They are representative of the deadbands of the units at the middle of the range.

The deadband values for the full range adjustable deadband switches and limited adjustable deadband switches indicate the values through which the deadband may be adjusted.

Generally, as the set point is adjusted through the operating range, the deadband will vary. Normally, it will become narrower as the set point is towards the bottom of the range, and will become wider when the set point is towards the top of the range. The graph shown below indicates representative trends of this type of deadband variation.

Temperature switch deadbands are a result of the characteristics of the vapor pressure curve as well as other factors. Normally, this results in a deadband which is narrower in the top third of the range than in the bottom third of the range. The values published are nominal and representative of midrange set points.

## Fluid Compatibility Guide

These recommendations are to be used as a guide only, as service life of material is dependent on temperature, concentrations, or catalysts that may be added and other conditions which are beyond our control.
Consult ASCO for specific service applications.
Note: Items in black circles are standard catalog units.
All others available on factory order.
P - Indicates preferred construction. S - Indicates satisfactory construction.

Transducer Material Code of Two Digits represents process connection material and diaphragm material, respectively; these are the sixth and seventh positions of the pressure transducer catalog number.
