## Control Thermal Expansion

## in Hot Water Heating Systems

Thermal expansion of heated water may occur wherever water is heated in a closed system (when the boiler water is isolated from the public water supply by a one-way valve, such as a feed water pressure reducing valve, backflow preventer, check valve, etc.). Watts Nonpotable water expansion tanks are designed to absorb the increased volume of water caused by thermal expansion and maintain a balanced pressure throughout the hot water heating system. They are used to prevent system damage and unnecessary relief valve discharge caused by excessive pressure from thermal expansion.

## Series 276H300,

IWTG

## Water Pressure Test Gauge

Ideal to accurately determine system pressure in a building. The $3 / 4^{\prime \prime}(20 \mathrm{~mm})$ hose connection easily attaches to a hose bibb or the drain connection on a water heater. A red indicator hand holds at the highest reading registered. When left on overnight, it will register the highest pressure in the system during that period.
(A)
$3 / 4$ " $(20 \mathrm{~mm})$ H.T. Hose Connection which easily attaches to an outside hose bibb or to the drain connection on a water heater.
(B)

A Red indicator hand that "HOLDS" at the highest reading registered, to record shock pressure or when left on overnight will register the highest surge pressure which occurred during that period.

(C)

Features a large ( $2^{1 / 2 "}$ " 65 mm )) face for easy reading.

| Model | Size (DN) |  | Range |  |
| :--- | :---: | :---: | :---: | :---: |
|  | in. | $m m$ | $p s i$ | bar |
| 276 H 300 | $3 / 4$ | 20 | $0-300$ | $0-21$ |
| IWTG | $3 / 4$ | 20 | $0-200$ | $0-14$ |

## Series SCV

## Service Check Valves

Series SCV service check valves facilitate the servicing of components in systems under pressure. They install between the system and the component.
As the component is threaded into the Service Check Valve, the spring loaded valve opens to system pressure.
As the component is removed, the valve closes, maintaining system integrity while the component is being inspected. This prevents having to drain the entire system each time a component is serviced.

## I. WARNING

This device is not to be used on safety relief valves or other safety or flow sensitive components.

## NOTICE

System pressure must be reduced prior to removing system component.

Available in sizes
$1 / 8 "$ and $1 / 22^{\prime \prime}$ inches.
Max. Temperature: $240^{\circ} \mathrm{F}\left(115^{\circ} \mathrm{C}\right)$, Max. Pressure: $150 \mathrm{psi}(10 \mathrm{bar})$

| Model. | Size (DN) |  |
| :--- | :---: | :---: |
|  | in. | $m m$ |
| SCV | $1 / 8$ | 3.2 |
| SCV | $1 / 2$ | 12.7 |

Typical Installation

## Series ETX-ASF

## Combination Packages

Series ETX-ASF hydronic boiler combination packages make it easier to buy system components by including an ETX expansion tank, AS air separator, and FV4-M1 float vent valve all in one package and for a lower cost than buying each of the components separately.

| Model | Air Separator |  | Float Vent FV-4M1 |  | Expansion Tank |  |  |

## Boiler Header Modules

## Complete Packages to Purge, Quiet, Fill, and Service Your Hydronic System

Out of the box, our Boiler Header Module delivers components that make following the industry recommended near-boiler piping virtually foolproof. Boiler industry recommendations (system purge station, followed by an air separator, followed by a service fitting) ensure the contractor correctly pipes a hydronic installation - quickly, easily, and neatly in a compact job space.

## Series ETX, ETSX

## Pressurized Expansion Tanks for Heating and Cooling Systems*

Series ETX and ETSX Pressurized Expansion Tanks for Heating and Cooling Systems are designed to absorb the increased volume of water created when water is heated. These tanks maintain system pressure below the relief setting of the relief valve. The Series ETX and ETSX's prepressurized steel tank features a durable expansion membrane that prevents contact of the water with the air in the tank. This rugged diaphragm minimizes loss of the air change and ensures long and trouble-free life for the system.

## Features

- Precharged at 12psi (83 kPa)
- Rugged flexible butyl diaphragm
- In-line and free standing models
- Compatible with glycol in systems
- Steel construction

## Models

ETX Mounts to supply piping
ETSX Free standing

## Specifications

Furnish and install as shown on plans a Watts Model ETX/ ETSX $\qquad$ gallon $\qquad$ " diameter x $\qquad$ " (high) precharged steel expansion tank with a fixed butyl bladder. The tank shall have an NPT system connection and a .302"-32 charging valve connection (standard tire valve) to facilitate the on-site charging of the tank to meet system requirements. The tank shall be factory precharged to 12psi. The tank shall be a Watts Series ETX or ETSX.

Maximum Working Temperature: $220^{\circ} \mathrm{F}\left(115^{\circ} \mathrm{C}\right)$
Maximum Working Pressure:
ETX-15, ETX-30, ETX-60: 75psi (517 kPa)
ETX-90 and ETSX Series: 100psi (6.9 bar)
Precharge (field adjustable): $12 \mathrm{psi}(83 \mathrm{kPa})$

Series ETX

*Not for use on potable water systems.

## Series ETA

## ASME Pressurized Expansion Tanks for Heating and Cooling Systems

## Models ETA 15 - ETA 240

Series ETA tanks are ASME fixed bladder type precharged expansion tanks. They are designed to absorb the expansion forces and control the pressure in heating and cooling systems. The water is contained in the heavy duty bladder preventing tank corrosion and waterlogging problems.

## Features

- ASME Section VIII Construction
- Heavy duty butyl bladder
- Precharged to 12psi (83 kPa) (Field Adjustable)
- Shell: Carbon steel
- Bladder: Heavy duty butyl
- Primer coated exterior

## Specifications

Furnish and install as shown on plans a Watts Model ETA
$\qquad$ gallon $\qquad$ " diameter x $\qquad$ " (high) precharged steel expansion tank with a fixed butyl bladder. The tank shall have a top NPT system connection and a .302" - 32" ( $7.6-812.8 \mathrm{~mm}$ ) charging valve connection (standard tire valve) to facilitate the on-site charging of the tank to meet system requirements. The tank must be constructed in accordance with Section VIII of the ASME Boiler and Pressure Vessel Code.

Maximum Design Pressure:
ETA 15 - ETA 60: 150psi (10.3 bar)
ETA 80 - ETA 240: 125psi (8.6 bar)
Precharged to 12psi (83 kPa)
Maximum Design Temperature: $240^{\circ} \mathrm{F}\left(115^{\circ} \mathrm{C}\right)$

For additional information, request literature ES-ETA.

## Series ET-RA

## ASME Pressurized Expansion Tanks for Heating and Cooling Systems

## Models ET-RA 35 - ET-RA 2000

Series ET-RA tanks are ASME removable bladder type precharged expansion tanks. They are designed to absorb the expansion forces and control the pressure in heating and cooling systems. The water is contained in the heavy duty bladder, preventing tank corrosion and waterlogging problems.

## Features

- ASME Section VIII Code Construction
- Removable butyl bladder
- Precharged to 12psi (83 kPa) (Field Adjustable)
- Shell: Carbon steel
- Bladder: Heavy duty butyl
- Primer coated exterior

## Specifications

Furnish and install as shown on plans a Watts Model ET-RA
$\qquad$ gallon $\qquad$ " diameter X $\qquad$ " (high) precharged steel expansion tank with a heavy duty butyl rubber bladder. The tank shall have NPT system connections and a .302" - 32" (7.6-812mm) charging valve connection (standard tire valve) to facilitate the on-site charging of the tank to meet system requirements. The tank must be constructed in accordance with Section VIII of the ASME Boiler and Pressure Vessel Code.

Maximum Design Pressure: 125psi* (8.6 bar)
Maximum Design Temperature: $240^{\circ} \mathrm{F}\left(115^{\circ} \mathrm{C}\right)$
Precharged to 12psi ( 83 kPa )
*Models with 200 and 250psi ratings are available.
For additional information, request literature ES-ET-RA.
