NEW

CONTROL SLIME GROWTH AND SCALE CONTROL IN ICE MACHINES WITH THESE NEW FILTERS

Specially designed for ice machines, this cartridge effectively filters dirt and particles as small as 1/2 micron in size. Utilizes depth filtration and Fibredyne™ media for superior dirt-holding capability, with NSF/ANSI Standard 42 and 53 certified to reduce cysts such as Cryptosporidium and Giardia. Leaves chlorine and chloramines within the water supplied to equipment, which helps to reduce slime and bacteria growth in the ice machine and ice bin.

Reduces ice machine maintenance, service costs and downtime caused by scale buildup which can result in the clogging of distribution lines, malfunction of probes, floats, pumps, solenoids and valves, and higher energy consumption (as tested by Everpure).

7SI Cartridge

- 3.5 gpm flow rate
- 25,000 gallon capacity

Part Number: 9606-01

4SI Cartridge

- 2.0 gpm flow rate
- 15,000 gallon capacity

Part Number: 9606-51
