Torque min. 133 in-lb, for control of air dampers

Application

For proportional modulation of dampers in HVAC systems. Actuator sizing should be done in accordance with the damper manufacturer's specifications.

The actuator is mounted directly to a damper shaft up to 1.05" in diameter by means of its universal clamp. A crankarm and several mounting brackets are available for applications where the actuator cannot be direct coupled to the damper shaft.

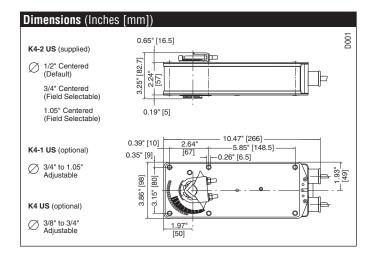

The actuator operates in response to a 2 to 10 VDC, with the addition of a 500Ω resistor, a 4 to 20 mA control input from an electronic controller or positioner. A 2 to 10 VDC feedback signal is provided for position indication or master-slave applications.

Operation

The AF series actuators provide true spring return operation for reliable fail-safe application and positive close-off on air tight dampers. The spring return system provides constant torque to the damper with, and without, power applied to the actuator.

The AF series provides 95° of rotation and is provided with a graduated position indicator showing 0 to 95°. The AF has a unique manual positioning mechanism which allows the setting of any damper position within its 95° of rotation. The actuator is shipped at +5° position (5° from full fail-safe) to provide automatic compression against damper gaskets for tight shut-off. When power is applied, the manual mechanism is released and the actuator drives toward the full fail-safe position. The actuator will memorize the angle where it stops rotating and use this point for its zero position for its normal control operations. The manual override can also be released physically by the use of a crank supplied with the actuator.

The AF uses a brushless DC motor which is controlled by an Application Specific Integrated Circuit (ASIC) and a microprocessor. The microprocessor provides the intelligence to the ASIC to provide a constant rotation rate and to know the actuator's exact zero position. The ASIC monitors and controls the brushless DC motor's rotation and provides a digital rotation sensing function to prevent damage to the actuator in a stall condition. The actuator may be stalled anywhere in its normal rotation without the need of mechanical end switches.

| Accessories | |
|--------------------|--|
| AV 10-18 | Shaft extension |
| IND-AF2 | Damper position indicator |
| K4 US | Universal clamp for 3/8" to 3/4" shafts |
| K4-1 US | Universal clamp for up to 1.05" dia jackshafts |
| K4-H | Universal clamp for hexshafts 3/8" to 5/8" |
| KH-AF | Crankarm for up to 3/4" round shaft (Series 2) |
| KH-AF-1 | Crankarm for up to 1.05" jackshaft (Series 2) |
| KH-AFV | V-bolt kit for KH-AF and KH-AF-1 |
| Tool-06 | 8mm and 10 mm wrench |
| SGA24 | Min. and/or man. positioner in NEMA 4 housing |
| SGF24 | Min. and/or man. positioner for flush panel mounting |
| ZG-R01 | 500 Ω resistor for 4 to 20 mA control signal |
| ZG-HTR | Thermostat/Heater Kit |
| ZDB-AF2 US | Angle of rotation limiter |
| ZG-100 | Universal mounting bracket |
| ZG-101 | Universal mounting bracket |
| ZG-102 | Multiple actuator mounting bracket |
| ZG-103 | Universal mounting bracket |
| ZG-104 | Universal mounting bracket |
| ZG-106 | Mounting bracket for Honeywell [®] Mod IV replacement or new crankarm type installations |
| ZG-107 | Mounting bracket for Honeywell [®] Mod III or Johnson [®] Series 100 replacement or new crankarm type installations |
| ZG-108 | Mounting bracket for Barber Colman® MA 3/4, |
| | Honeywell [®] Mod III or IV or Johnson [®] Series 100 |
| | replacement or new crankarm type installations |
| ZG-AF US | Crankarm adaptor kit for AF/NF |
| ZG-AF108 | Crankarm adaptor kit for AF/NF |
| ZS-100 | Weather shield (metal) |
| ZS-150 | Weather shield (polycarbonate) |
| ZS-260 | Explosion-proof housing |
| ZS-300 | NEMA 4X housing |
| NOTE: When using A | F24-SR US actuators, only use accessories listed on this page. |

NOTE: When using AF24-SR US actuators, only use accessories listed on this page. For Actuator Wiring Information and Diagrams, Please See Belimo Wiring Guide (pg 349).

Typical Specification

Spring return control damper actuators shall be direct coupled type which require no crankarm and linkage and be capable of direct mounting to a jackshaft up to a 1.05" diameter. The actuator must provide proportional damper control in response to a 2 to 10 VDC or, with the addition of a 500 Ω resistor, a 4 to 20 mA control input from an electronic controller or positioner. The actuators must be designed so that they may be used for either clockwise or counterclockwise fail-safe operation. Actuators shall have control direction of rotation switch accessible on its cover. Actuators shall use a brushless DC motor controlled by a microprocessor and be protected from overload at all angles of rotation. Run time shall be constant, and independent of torque. A 2 to 10 VDC feedback signal shall be UL Approved and CSA certified, have a 5 year warranty, and be manufactured under ISO 9001 International Quality Control Standards. Actuators shall be as manufactured by Belimo.

Wiring Diagrams

🔀 INSTALLATION NOTES

Provide overload protection and disconnect as required.

CAUTION Equipment damage!

Actuators may be connected in parallel. Power consumption and input impedance must be observed.

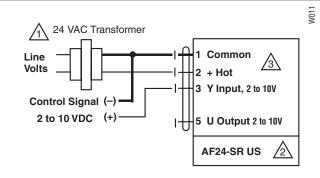

- Actuators may also be powered by 24 VDC.
- Only connect common to neg. (–) leg of control circuits.

APPLICATION NOTES

The ZG-R01 500 Ω resistor converts the 4 to 20 mA control signal to 2 to 10 VDC, up to 2 actuators may be connected in parallel.

WARNING Live Electrical Components!

21 During installation, testing, servicing and troubleshooting of this product, it maybe necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.

2 to 10 VDC control
